DETAILED ACTION

Claim Objections

1. Claims 19 and 20 are objected to because of the following informalities: Claims 19 and 20 depend on claim 17. It appears that claims 19 and 20 should depend on claim 18 since they are method claims. For the purposes of examination it will be assumed that claims 19 and 20 depend on claim 18. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 2, 10, 11, 13 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Marritt et al.

Referring to claims 1 and 18, Marritt et al. discloses in an electric vehicle having an energy storage device, an indicator system and method comprising: a processing source (fig. 1 (7)) to calculate a normalized amount of power available from the energy storage device (column 38, lines 8-26), and an indicator (fig. 1 (9)) to indicate the normalized amount of power available from the energy storage device (column 38, lines 27-33).

Referring to claim 2, Marritt et al. discloses the system as claimed wherein the energy source is a battery (fig. 1 (11)) which provides power for use in providing electric assist and the processing source calculates the normalized amount of power available

Application/Control Number: 10/605,389

Art Unit: 2858

from the battery as a normalized battery state of charge (SOC) such that the indicator indicates the normalized SOC (column 12, lines 39-54 and column 38, lines 8-33).

Referring to claim 10, Marritt et al. discloses the system as claimed wherein the normalized amount of power available from the energy storage device is a range selected from the group comprising below-normal battery charge, normal battery charge, and above-normal battery charge (fig. 4 and column 38, lines 27-33).

Referring to claim 11, Marritt et al. discloses the system as claimed wherein the range is based on a normalized battery state of charge (SOC) (column 12, lines 39-54).

Referring to claim 13, Marritt et al. discloses the system as claimed wherein the indicator includes a percentage display for indicating the normalized amount of power available from the energy storage device (column 38, lines 27-33).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Marritt et al. in view of Baer et al.

Referring to claim 14, Marritt et al. discloses the system as claimed except wherein the energy source is a battery (fig. 1 (11)), which provides power for use in providing electric assist.

Marritt et al. does not disclose the indicator includes an illuminable light that is illuminated based on the normalized amount of power available from the battery, wherein electric assist is unavailable if the light is illuminated and electric assist is available if the light is unilluminated.

Baer et al. discloses a battery management system wherein the energy source is a battery (fig. 1 (50)) which provides power for use in providing electric assist and the indicator (fig. 1 (140)) includes an illuminable light that is illuminated based on the normalized amount of power available from the battery, wherein electric assist is unavailable if the light is illuminated and electric assist is available if the light is unilluminated (column 14, lines 53-61).

Therefore, it would have been obvious to one skilled in the art at the time of the invention to incorporate the indicator of Baer et al. into the system of Marritt et al. for the purpose of providing better indication to the operator that the system is not charging (column 14, lines 53-61).

Allowable Subject Matter

- 6. Claims 3-9, 12, 15-17, 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following patents are cited to show the state of the art with respect to indicating power in an energy storage device.

Application/Control Number: 10/605,389 Page 5

Art Unit: 2858

USPN 6,700,213 to Wakashiro et al.: This patent shows an apparatus for calculating state of charge of a battery.

USPN 6,061,639 to Wistrand: This patent shows an apparatus for normalizing a determined battery capacity.

USPN 4,595,880 to Patil: This patent shows an apparatus for displaying a state of charge for a battery.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy J. Dole whose telephone number is (571) 272-2229. The examiner can normally be reached on Mon. thru Fri. from 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
